TARGET GROUPS

- * INDUCE community and trainers
- * Industrial associations, consultants, energy experts & trainers
- * Companies as end users & piloting partners
- * Other interested actors (e.g. network organizations)

This project has received funding from the European Union's Horizon 2020 Coordination & Research and Innovation Action under Grant Agreement No 785047.

PROJECT BACKGROUND

The INDUCE project will develop an open access toolkit where training material, online lessons, guidelines and tools will be made available for companies aiming to increase their energy efficiency. Besides, INDUCE methodology will be integrated in the platform with the objective to design a specific capacity building programme for every company accessing INDUCE toolkit, resulting in ad-hoc training adapted to the company's needs and opportunities. The INDUCE methodology and toolkit will be tested and validated in 15 pilot companies from the food and beverage sector in four countries that represent over 45% of the EU companies in this sector: Spain, France, the Netherlands and Germany. In a second replication step, INDUCE community of trainers will be established by certifying 60 INDUCE trainers. They will be in charge of implementing INDUCE methodology in another 300 companies, hence increasing INDUCE impact up to 106 GWh/year of energy savings.

PROJECT OBJECTIVES

Goal 1: To develop an adaptable methodology for the design and implementation of capacity building programmes through Human-Centered Design approach.

Goal 2: To identify general needs, requirements and motivations in the F&B and agro-food sector as well as best practices and transfer them to the project's audience.

Goal 3: To define interventions, adapt tools and produce guidelines that will be made available to an audience of over 15.000 companies and 100.000 stakeholders to increase their capabilities in implementing energy efficiency.

Goal 4: To unlock the implementation of 400+ measures on energy efficiency, leveraging a potential for energy savings up to 106 GWh/year through the provision of ad-hoc recommendations and behaviour change.

Goal 5: To establish changes in the mind-set of all actors in the companies for the inclusion of energy efficiency.

Goal 6: To create an INDUCE community of trainers for the implementation of INDUCE methodology in at least 300 companies within Spain, France, The Netherlands and Germany.

Goal 7: To make available the capacity building programmes and other results developed and to define a business plan adapted to the products and partners of the consortium.

Goal 8: To influence national programmes and correct existing barriers for the implementation of INDUCE interventions and training for the F&B and agro-food sector.
